Ideation Phase
Empathize & Discover

Date	19 September 2022
Team ID	PNT2022TMID30907
Project Name	Project - Emerging Methods for Early Detection of Forest Fires
Maximum Marks	4 Marks

Empathy Map Canvas:

An empathy map is a simple, easy-to-digest visual that captures knowledge about a user's behaviours and attitudes.

It is a useful tool to helps teams better understand their users.
Creating an effective solution requires understanding the true problem and the person who is experiencing it. The exercise of creating the map helps participants consider things from the user's perspective along with his or her goals and challenges.

Says

Determines whether the forest fire takes place based on the dataset given as input

Thinks

To create an application that predicts the forest fire using various ML Algorithms

Does

provides csv files as input and predict the output(on fire or not) using ML algorithms

Feels

The project can be improvized further by giving input as image/video instead of dataset.It is done by object detection.
